- Individuals with limited range of motion in hand or wrist
- Middle Eastern and East-Asian Writers

FEATURES:

- Curved tip
- Various sizes used
- Ergonomic design
- Helps see what you are writing from either left, right, up and down

PATENT INFORMATION

A provisional and design patent application has been filed as of March 2018. The patent search was performed by The Mars Rising Network. It was concluded that there is nothing similar to this product on the market, which means this unique device could be patented and used by people everywhere.

SUMMARY

Are you a lefty who's tired of smearing when you write in ink? Or maybe you're an artist looking for a better illustration tool that allows you to work to intricate detail without smearing or smudging? Perhaps, you're just someone looking for a cleaner, clearer writing tool to improve your handwriting.

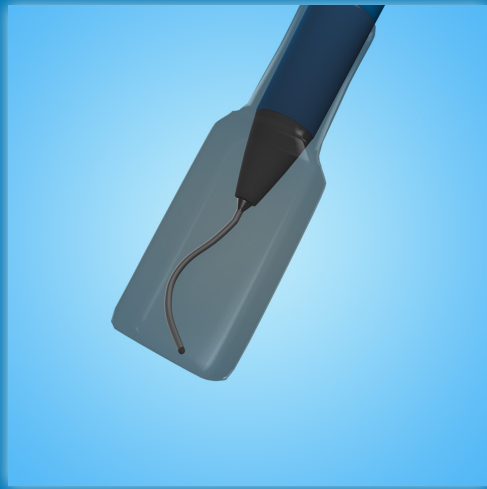

Look no further! The **Dolphin Pen™** is a new way of writing. It uses the legacy concepts of everyday writing pen instrument while adding an elongated tip with a curvature shaped like a dolphin. The Dolphin Pen™ can be outfitted to almost any pen, making it a tool that anyone can enjoy, artist or not!

The Dolphin Pen's curved tip allows for a more controlled and comfortable writing experience as well as adding wider visibility as one writes. This type of visible write tracking is especially beneficial to left handed writers, who struggle seeing what they're writing, often times having to angle their paper or hand in very uncomfortable ways. The Dolphin Pen™ can also be seen as an ergonomic solution for those struggling to angle their hand in a way that is comfortable for them to write cursive or print.

The tip of the Dolphin Pen™ has a firm, felt or plastic nib that is housed in the curved metal funnel of various sizes. The various sizes would be of interest to an artist looking for different tip widths to provide various line weights in their illustrations and work. As a writer of Asian script you will benefit from the unique curvature of the Dolphin Pen that allows for pristine right-to-left or vertical writing.

The Dolphin Pen™ dispenses ink evenly, making it suitable for writing or detailed illustrations.

So whether you're an artist looking for a new, exciting tool to add to your illustrating workflow, a lefty who's tired of writing blind or smeared letters, or someone looking for an ergonomic writing tool that allows them to write at a more comfortable angle, the **Dolphin Pen™** is for you!

Curved tip gives more
precise control

About the Developer

The inventor, Clarence Parker of Holly Springs, NC had an idea to help writers and artists all over the world have more precise control, visibility and comfort while writing. Clarence contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that he may see success with this great idea and turn into a real global product. He is actively seeking a company that would have an interest in licensing the product for a royalty.
